About This Software

ViewTracker is a gaming utility that turns your webcam into a head tracking controller. Simply launch any supported game while ViewTracker is running and begin using the position of your head to change your view in-game. Enjoy stable and responsive head tracking with no hardware requirement other than a supported webcam.

Gamers have been using head tracking for years and many find it indispensable. It has proven to be especially suitable for simulator games such as flight sims or racing/vehicle sims. Using your head to change your view feels natural and allows you to keep your hands on the controls while looking around.

Most head tracking solutions involve devices that must be worn on your head and are either expensive or require a lot of time and effort to build yourself. ViewTracker is able to be accurate and reliable while only using a webcam. It uses recent machine learning techniques that have been adapted specifically for head tracking and works well even if you wear glasses or have

objects in the background.

ViewTracker uses some of your computer's resources to run the tracking, but care has been taken to minimize its impact on gaming performance. It doesn't use graphics card resources and makes use of CPU resources that are often left unused when gaming on modern multi-core processors.

Most webcams should be compatible as long as they provide at least 30 FPS at at 640x480 resolution or above. It must have a 64-bit driver for Windows 10 and be DirectShow compatible.

Any game that has a head tracking option should be compatible with ViewTracker. Some games that are known to work:

- Aerofly FS2
- Assetto Corsa
- American Truck Simulator
- Arma II
- Arma III
- BeamNG.drive
- DCS: World
- Elite: Dangerous
- Euro Truck Simulator 2
- Farming Simulator 2017
- GRID
- IL-2 Sturmovik Battle of Stalingrad
- Kerbal Space Program
- Live for Speed
- Prepar3D v4
- Project Cars 2 (must launch in Steam VR mode)
- Star Citizen
- Train Simulator 2018
- War Thunder
- X-Plane 11

This list is not complete and more games will be added when it's verified that they work.

Title: ViewTracker
Genre: Utilities
Developer:
John Kevin Corcoran
Publisher:
John Kevin Corcoran
Release Date: 6 Sep, 2018

b4d347fde0

Minimum:

Requires a 64-bit processor and operating system

OS: Windows 10

Processor: Intel Sandy Bridge or later

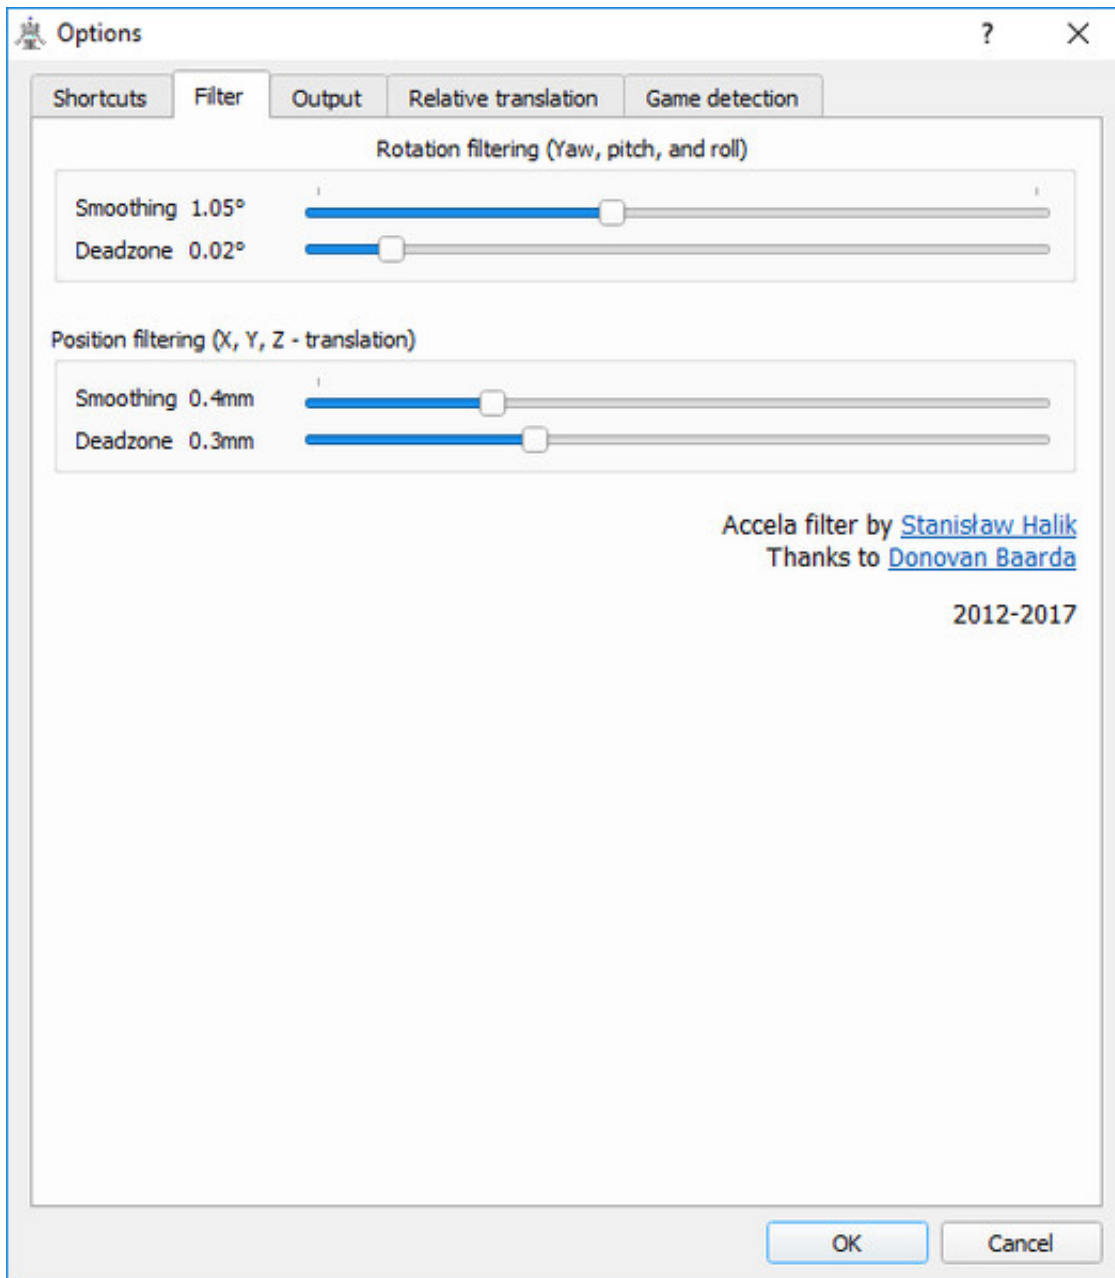

Memory: 4 GB RAM

Network: Broadband Internet connection

Storage: 300 MB available space

Additional Notes: Webcam that supports at least 640x480 resolution at 30 FPS

Shortcuts Filter **Output** Relative translation Game detection

Output remap

Assign input axis to output axis.

Destination	Source	Invert
Yaw	Yaw	<input checked="" type="checkbox"/>
Pitch	Pitch	<input type="checkbox"/>
Roll	Roll	<input type="checkbox"/>
X	X	<input checked="" type="checkbox"/>
Y	Y	<input type="checkbox"/>
Z	Z	<input type="checkbox"/>

Custom center pose

Alter the centered position sent to games. Useful if the default position is too much downward or upward.

Yaw	0.00°	X	0.000 cm
Pitch	0.00°	Y	0.000 cm
Roll	0.00°	Z	0.000 cm

CSV Data Logging

Enable - You will be asked for a filename whenever tracking starts

OK Cancel

well, downloaded the demo first, worked like a charm was quite impressed with it for the price point so i bought it. now, just tried it in ETS2 and its so sloppy, jerky works when it wants to... never had this in the demo version so im a little confused, also tried it with a newer webcam and it is worse. dont get it!! Works just fine with DCS using my Logitech C615 webcam.

Great piece of software for the price.

. Does not work for IL-2 : Battle of Stalingrad.

It essentially jolts around and works when it wants to. I did try to play around with the settings and adjust it, to give this software a chance but it has a mind of it's own. I also followed all instructions on the developers steam community guides.

I'm sure for other games it has the potential to be outstanding once you get it working, but for IL-2 BoS it won't work. Can't lie it was disappointing that it does it's own thing.

Refunded.

+rep to steam for being fair and refunding, good customer service.. Use in Xplane 11 . Great piece of software. 10/10. i tired using this followed what others said on the forums but the dam app wont even start and my os is not corrupted plus no "how to" guide to setup and get it working? what a lovely piece of crap not worth 14 bucks its worth no more than 1 penny!
